# Important - Plugins

The demo scenes in the package are the following free assets. The package does not need these assets to work properly but it's recommended to use them.

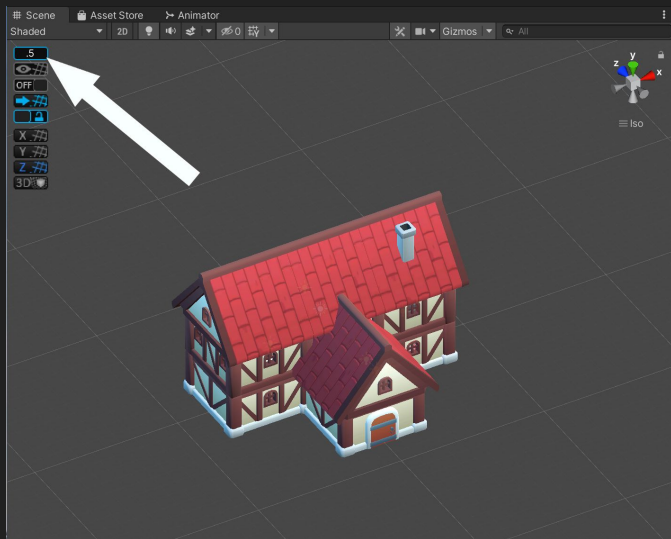

1. Post Processing Stack 2
2. Progrid

Let's get started!

# Download Progrid

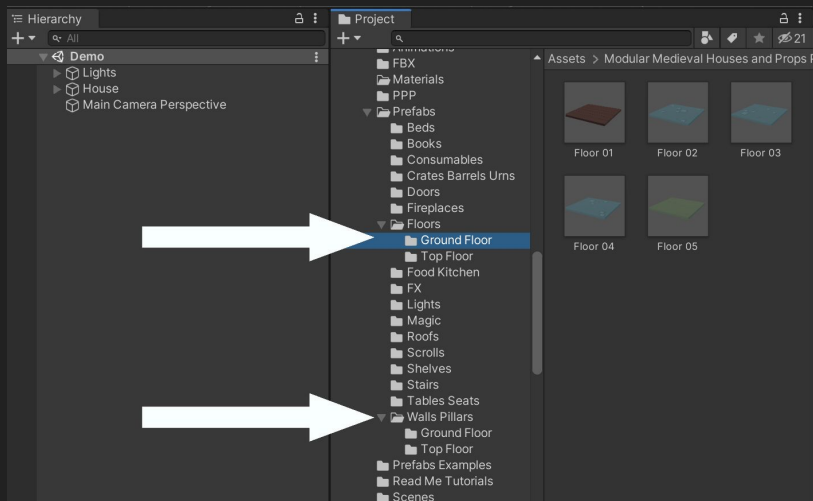

It's highly recommended to use Unity's free Progrid when using this package for easy snapping. It will help you to place the walls, floors and roofs easily!

**Change the Snap value to 0.5** in the settings. See image on the left.

# Just drag and drop!

Just drag and drop the prefabs from the prefabs folder to the scene or hierarchy! Easy peasy!

Just note that the floor, walls and pillars are separated into 2 categories. Ground floor and Top floor.

The prefabs in the Ground floor folder are prefabs that are meant for the ground floor only whereas prefabs from the Top floor folder are for 2nd floor and above.

That's it for the tutorial. Have fun with Cute series!
